

Let us study the world around us. Please observe and study two different parts of nature over two different days and complete the below. This should be done without books or computers. Take time to wonder at what you have selected. Examples: leaf, tree, moon, snow, bird, spider, plant, water, stars, sunlight, rocks (no landscaping rocks, Lana).

## Part of Nature ONE

Sketch what you see with your naked eye.

Everyone's skill level will vary, but try to capture and notice details.

Write some notes on what you see. Study it, really study it.

Here are some thought starters: What do you notice?, What happens (does it flow, run, blow, crunch)?

## Part of Nature TWO

Sketch what you see with your naked eye.

Everyone's skill level will vary, but try to capture and notice details.

Write some notes on what you see. Study it, really study it.

Here are some thought starters: What do you notice?, What happens (does it flow, run, blow, crunch)?
